Mathletics
US Common Core
Skill Quests
May 2022
Grade 7 ..... 4
1 Ratios \& Proportional Relationships ..... 4
1.1 Analyze proportional relationships and use them to solve real-world and mathematical problems ..... 4
2 The Number System ..... 5
2.1 Apply and extend previous understandings of operations with fractions ..... 5
3 Expressions \& Equations ..... 7
3.1 Use properties of operations to generate equivalent expressions ..... 7
3.2 Solve real-life and mathematical problems using numerical and algebraic expressions and equations ..... 7
4 Geometry ..... 9
4.1 Draw construct, and describe geometrical figures and describe the relationships between them ..... 9
4.2 Solve real-life and mathematical problems involving angle measure, area, surface area, and volume ..... 9
5 Statistics \& Probability ..... 11
5.1 Use random sampling to draw inferences about a population ..... 11
5.2 Draw informal comparative inferences about two populations ..... 11
5.3 Investigate chance processes and develop, use, and evaluate probability models. ..... 12
Grade 8 ..... 13
1 The Number System ..... 13
1.1 Know that there are numbers that are not rational, and approximate them by rational numbers ..... 13
2 Expressions \& Equations ..... 14
2.1 Work with radicals and integer exponents ..... 14
2.2 Understand the connections between proportional relationships, lines, and linear equations ..... 15
2.3 Analyze and solve linear equations and pairs of simultaneous linear equations ..... 15
3 Functions ..... 17
3.1 Define, evaluate, and compare functions ..... 17
3.2 Use functions to model relationships between quantities ..... 17
4 Geometry ..... 19
4.1 Understand congruence and similarity using physical models, transparencies, or geometry software ..... 19
4.2 Understand and apply the Pythagorean Theorem ..... 20
4.3 Solve real-world and mathematical problems involving volume of cylinders, cones, and spheres ..... 20
5 Statistics \& Probability. ..... 21
5.1 Investigate patterns of association in bivariate data ..... 21

## Grade 7

## 1 Ratios \& Proportional Relationships

### 1.1 Analyze proportional relationships and use them to solve real-world and mathematical problems

| Outcome | Quests | Content |
| :--- | :--- | :--- |
| 1. Compute unit rates associated <br> with ratios of fractions, including <br> ratios of lengths, areas and other <br> quantities measured in like or <br> different units. | Unit rates with <br> fractions | Solving unit rate problems <br> involving fractions |
| 2. Decide whether two quantities <br> are in a proportional relationship, <br> e.g., by testing for equivalent ratios <br> in a table or graphing on a <br> coordinate plane and observing <br> whether the graph is a straight line <br> through the origin. | Identify proportional <br> relationships | Identifying proportional <br> relationships |
| 3. Identify the constant of <br> proportionality (unit rate) in tables, <br> graphs, equations, diagrams, and <br> verbal descriptions of proportional <br> relationships. | Constant of <br> proportionality | Identifying the constant of <br> proportionality |
| 4. Represent proportional <br> relationships by equations. | Represent proportional <br> relationships | Representing proportional <br> relationships: equations |
| 5. Explain what a point (x, y) on the <br> graph of a proportional relationship <br> means in terms of the situation, <br> with special attention to the points <br> (0, 0) and (1, r) where r is the unit <br> rate. | Graphs of proportional <br> relationships | Interpreting graphs of <br> proportional relationships |
| 6. Use proportional relationships to <br> solve multistep ratio and percent <br> problems. Examples: simple <br> interest, tax, markups and <br> markdowns, gratuities and <br> commissions, fees, percent increase <br> and decrease, percent error. | Ratio \& percent <br> problems |  |

## 2 The Number System

### 2.1 Apply and extend previous understandings of operations with fractions

| Outcome | Quests | Content |
| :---: | :---: | :---: |
| 1. Describe situations in which opposite quantities combine to make 0. | Opposites | Describing situations involving opposites |
| 2. Understand $p+q$ as the number located a distance \|q| from $p$, in the positive or negative direction depending on whether $q$ is positive or negative. Show that a number and its opposite have a sum of 0 (are additive inverses). Interpret sums of rational numbers by describing real-world contexts. | Add rational numbers | Opposites \& absolute value |
|  |  | Adding rational numbers |
|  |  | Adding positive \& negative fractions |
|  |  | Adding positive \& negative decimals |
| 3. Understand subtraction of rational numbers as adding the additive inverse, $p-q=p+(-q)$. Show that the distance between two rational numbers on the number line is the absolute value of their difference, and apply this principle in real-world contexts. | Subtract rational numbers | Subtracting rational numbers: adding the inverse |
|  |  | Subtracting positive \& negative fractions |
|  |  | Subtracting positive \& negative decimals |
|  |  | Subtracting integers |
|  |  | Subtracting rational numbers: absolute value |
| 4. Apply properties of operations as strategies to add and subtract rational numbers. | Rational numbers: addition properties | Add \& subtract rational numbers: properties |
| 5. Understand that multiplication is extended from fractions to rational numbers by requiring that operations continue to satisfy the properties of operations, particularly the distributive property, leading to products such as $(-1)(-1)=1$ and the rules for multiplying signed numbers. Interpret products of rational numbers by describing real-world contexts. | Multiply rational numbers | Multiplying rational numbers |
|  |  | Multiplying positive \& negative fractions |
|  |  | Multiplying positive \& negative decimals |
|  |  | Multiplying integers |
|  |  | Products of rational numbers: real-world contexts |
| 6. Understand that integers can be divided, provided that the divisor is not zero, and every quotient of integers (with non-zero divisor) is a rational number. If $p$ and $q$ are integers, then $-(p / q)=(-p) / q=p /(-$ $q)$. Interpret quotients of rational | Divide integers | Dividing integers |
|  |  | Quotients of rational numbers: real-world contexts |

| numbers by describing real-world <br> contexts. |  |  |
| :--- | :--- | :--- |
| 7. Apply properties of operations as <br> strategies to multiply and divide <br> rational numbers. | Rational numbers: <br> properties | Multiply \& divide rational <br> numbers: properties |
| 8. Convert a rational number to a <br> decimal using long division; know <br> that the decimal form of a rational <br> number terminates in 0s or <br> eventually repeats. | Convert rational <br> numbers to decimals | Use long division to convert <br> rationals to decimals |
| 9. Solve real-world and <br> mathematical problems involving <br> the four operations with rational <br> numbers. | Rational numbers <br> problems: 4 operations | Rational numbers problems: 4 <br> operations |

## 3 Expressions \& Equations

### 3.1 Use properties of operations to generate equivalent expressions

| Outcome | Quests | Content |
| :--- | :--- | :--- |
| 1. Apply properties of operations as <br> strategies to add, subtract, factor, <br> and expand linear expressions with <br> rational coefficients. | Linear expressions: <br> properties | Simplify algebraic expressions: <br> add \& subtract |
|  | Distributive property: algebraic <br> expressions |  |
| Factoring algebraic <br> expressions |  |  |
| 2. Understand that rewriting an <br> expression in different forms in a <br> problem context can shed light on <br> the problem and how the quantities <br> in it are related. | Interpret expressions | Rearranging expressions to <br> interpret quantities |

### 3.2 Solve real-life and mathematical problems using numerical and algebraic expressions and equations

| Outcome | Quests | Content |
| :---: | :---: | :---: |
| 3. Solve multi-step real-life and mathematical problems posed with positive and negative rational numbers in any form (whole numbers, fractions, and decimals), using tools strategically. Apply properties of operations to calculate with numbers in any form; convert between forms as appropriate; and assess the reasonableness of answers using mental computation and estimation strategies. | Problems with rational numbers | Solving problems with rational numbers |
|  |  | Converting terminating decimals |
| 4. Solve word problems leading to equations of the form $p x+q=r$ and $p(x+q)=r$, where $p, q$, and $r$ are specific rational numbers. Solve equations of these forms fluently. Compare an algebraic solution to an arithmetic solution, identifying the sequence of the operations used in each approach. | Solve 2-step equations | Solving 2-step equations: word problems |
|  |  | 2-step equations, positive integer coefficients |
|  |  | 2-step equations, integer coefficients |
|  |  | 2-step equations, positive rational coefficients |
|  |  | 2-step equations, rational coefficients |

|  |  | 2-step equations, distributive <br> property |
| :--- | :--- | :--- |
| 5. Solve word problems leading to <br> inequalities of the form $p x+q>r$ or <br> $p x+q<r$, where $p, q$, and $r$ are <br> specific rational numbers. Graph <br> the solution set of the inequality <br> and interpret it in the context of the <br> problem. | Solve 2-step <br> inequalities | Creating \& solving 2-step <br> inequalities |
|  |  | Representing inequalities |

## 4 Geometry

### 4.1 Draw construct, and describe geometrical figures and describe the relationships between them

| Outcome | Quests | Content |
| :--- | :--- | :--- |
| 1. Solve problems involving scale <br> drawings of geometric figures, <br> including computing actual lengths <br> and areas from a scale drawing <br> and reproducing a scale drawing at <br> a different scale. | Scale drawings | Scale drawings |
| 2. Draw (freehand, with ruler and <br> protractor, and with technology) <br> geometric shapes with given <br> conditions. Focus on constructing <br> triangles from three measures of <br> angles or sides, noticing when the <br> conditions determine a unique <br> triangle, more than one triangle, or <br> no triangle. | Construct triangles | Triangle Inequality Theorem |
| 3. Describe the two-dimensional <br> figures that result from slicing <br> three-dimensional figures, as in <br> plane sections of right rectangular triangles with <br> prisms and right rectangular <br> pyramids. | Cross sections of 3-D <br> figures | Describing cross sections of 3- <br> D figures |

### 4.2 Solve real-life and mathematical problems involving angle measure, area, surface area, and volume

## Outcome

4. Know the formulas for the area and circumference of a circle and use them to solve problems; give an informal derivation of the relationship between the circumference and area of a circle.
5. Use facts about supplementary, complementary, vertical, and adjacent angles in a multi-step problem to write and solve simple equations for an unknown angle in a figure.

Quests Content
Finding the area of a circle
Introducing the parts of a circle
Finding the circumference of a circle

Supplementary angles
Complementary angles
Adjacent angles
Vertical angles

| 6. Solve real-world and mathematical problems involving area, volume and surface area of two- and three-dimensional objects composed of triangles, quadrilaterals, polygons, cubes, and right prisms. | Area, volume \& surface area | Area: polygons |
| :---: | :---: | :---: |
|  |  | Solving real-life problems: area of polygons |
|  |  | Volume: right prisms |
|  |  | Surface area: rectangular \& triangular prisms |

## 5 Statistics \& Probability

### 5.1 Use random sampling to draw inferences about a population

| Outcome | Quests | Content |
| :--- | :--- | :--- |
| 1. Understand that statistics can be <br> used to gain information about a <br> population by examining a sample <br> of the population; generalizations <br> about a population from a sample <br> are valid only if the sample is <br> representative of that population. <br> Understand that random sampling <br> tends to produce representative <br> samples and support valid <br> inferences. |  | Understanding sampling |
| 2. Use data from a random sample <br> to draw inferences about a <br> population with an unknown <br> characteristic of interest. Generate <br> multiple samples (or simulated <br> samples) of the same size to gauge <br> the variation in estimates or <br> predictions. | Draw inferences from <br> samples | Drawing inferences from <br> samples |

### 5.2 Draw informal comparative inferences about two populations

| Outcome | Quests | Content |
| :--- | :--- | :--- |
| 3. Informally assess the degree of <br> visual overlap of two numerical <br> data distributions with similar <br> variabilities, measuring the <br> difference between the centers by <br> expressing it as a multiple of a <br> measure of variability. | Compare data <br> distributions | Comparing data distributions |
| 4. Use measures of center and <br> measures of variability for <br> numerical data from random <br> samples to draw informal <br> comparative inferences about two <br> populations. | Draw comparative <br> inferences | Drawing comparative <br> inferences |

### 5.3 Investigate chance processes and develop, use, and evaluate probability models

| Outcome | Quests | Content |
| :--- | :--- | :--- |
| 5. Understand that the probability <br> of a chance event is a number <br> between 0 and 1 that expresses the <br> likelihood of the event occurring. <br> Larger numbers indicate greater <br> likelihood. A probability near 0 <br> indicates an unlikely event, a <br> probability around 1/2 indicates an <br> event that is neither unlikely nor <br> likely, and a probability near 1 <br> indicates a likely event. | Introduction to <br> probability |  |
| 6. Approximate the probability of a <br> chance event by collecting data on <br> the chance process that produces it <br> and observing its long-run relative <br> frequency, and predict the <br> approximate relative frequency <br> given the probability. | Probability of chance <br> events | Probability of chance events: <br> relative frequency |
| 7. Develop a uniform probability <br> model by assigning equal <br> probability to all outcomes, and use <br> the model to determine probabilities <br> of events. | Determine the <br> probability of events | Predicting outcomes of chance <br> experiments |
| 8. Develop a probability model <br> (which may not be uniform) by <br> observing frequencies in data <br> generated from a chance process. | Observe frequencies in <br> data | Finding the complement of an <br> event |
| probability approximate |  |  |$|$| Comparing observed |
| :--- |
| frequency \& expected |
| frequency |

## Grade 8

## 1 The Number System

### 1.1 Know that there are numbers that are not rational, and approximate them by rational numbers

| Outcome | Quests | Content |
| :---: | :---: | :---: |
| 1. Know that numbers that are not rational are called irrational. <br> Understand informally that every number has a decimal expansion; for rational numbers show that the decimal expansion repeats eventually, and convert a decimal expansion which repeats eventually into a rational number. | Rational \& irrational numbers | Describing properties of irrational numbers |
|  |  | Classifying real numbers |
|  |  | Converting repeating decimals to rational numbers |
|  |  | Repeating \& terminating decimals as fractions |
| 2. Use rational approximations of irrational numbers to compare the size of irrational numbers, locate them approximately on a number line diagram, and estimate the value of expressions (e.g., $\pi \wedge 2$ ). | Approximate irrational numbers | Comparing irrational numbers |
|  |  | Locating irrational numbers on a number line |
|  |  | Approximating the value of an irrational number |
|  |  | Finding square roots of nonperfect squares |

## 2 Expressions \& Equations

### 2.1 Work with radicals and integer exponents

| Outcome | Quests | Content |
| :---: | :---: | :---: |
| 1. Know and apply the properties of integer exponents to generate equivalent numerical expressions. | Properties of integer exponents | Using exponent notation |
|  |  | Product of powers, numerical base |
|  |  | Product of powers, algebraic base |
|  |  | Quotient of powers, numerical base |
|  |  | Quotient of powers, algebraic base |
|  |  | Power of a power, numerical base |
|  |  | Power of a power, algebraic base |
|  |  | Zero exponents, numerical base |
|  |  | Zero exponents, algebraic base |
|  |  | Negative exponents, numerical base |
|  |  | Negative exponents, algebraic base |
|  |  | Simplifying expressions, numerical base |
|  |  | Simplifying expressions, algebraic base |
| 2. Use square root and cube root symbols to represent solutions to equations of the form $x^{2}=p$ and $x^{3}$ $=p$, where $p$ is a positive rational number. Evaluate square roots of small perfect squares and cube roots of small perfect cubes. Know that $\sqrt{ } 2$ is irrational. | Square \& cube roots | Investigating square roots \& cube roots |
|  |  | Squares \& square roots |
|  |  | Evaluating expressions with square \& cube roots |
|  |  | Square roots of fractions \& decimals |
|  |  | Cubes \& cube roots |
| 3. Use numbers expressed in the form of a single digit times an integer power of 10 to estimate very large or very small quantities, and to express how many times as much one is than the other. | Write numbers in scientific notation | Introducing scientific notation |
|  |  | Converting scientific notation to standard form |
|  |  | Converting standard form to scientific notation |
| 4. Perform operations with numbers expressed in scientific notation, including problems where both | Calculations in scientific notation | Calculations in scientific notation |

| decimal and scientific notation are |  |  |
| :--- | :--- | :--- |
| used. Use scientific notation and |  |  |
| choose units of appropriate size for |  |  |
| measurements of very large or very |  |  |
| small quantities (e.g., use |  |  |
| millimeters per year for seafloor |  |  |
| spreading). Interpret scientific |  |  |
| notation that has been generated |  |  |
| by technology |  |  |

### 2.2 Understand the connections between proportional relationships, lines, and linear equations

| Outcome | Quests | Content |
| :--- | :--- | :--- |
| 5. Graph proportional relationships, <br> interpreting the unit rate as the <br> slope of the graph. Compare two <br> different proportional relationships <br> represented in different ways. | Proportional <br> relationships | Graphing proportional <br> relationships |
| 6. Use similar triangles to explain <br> why the slope $m$ is the same <br> between any two distinct points on <br> a non-vertical line in the coordinate <br> plane; derive the equation $y=m x$ <br> for a line through the origin and the <br> equation $y=m x+b$ for a line <br> intercepting the vertical axis at b. | Understand slope \& in - | Comparing proportional <br> relationships |

### 2.3 Analyze and solve linear equations and pairs of simultaneous linear equations

| Outcome | Quests | Content |
| :--- | :--- | :--- |
| 7. Give examples of linear <br> equations in one variable with one <br> solution, infinitely many solutions, <br> or no solutions. Show which of <br> these possibilities is the case by <br> successively transforming the given | Solution types of linear <br> equations | Solution types of linear <br> equations |

| equation into simpler forms, until an equivalent equation of the form $x=$ $\mathrm{a}, \mathrm{a}=\mathrm{a}$, or $\mathrm{a}=\mathrm{b}$ results (where a and $b$ are different numbers). |  |  |
| :---: | :---: | :---: |
| 8. Solve linear equations with rational number coefficients, including equations whose solutions require expanding expressions using the distributive property and collecting like terms. | Solve linear equations | Solving 3-step linear equations |
|  |  | Solving linear equations, variables on both sides |
|  |  | Solving linear equations, distributive property |
|  |  | Using substitution to check solutions |
| 9. Understand that solutions to a system of two linear equations in two variables correspond to points of intersection of their graphs, because points of intersection satisfy both equations simultaneously. | Identify solutions, systems of equations | Identifying solutions, systems of equations |
| 10. Solve systems of two linear equations in two variables algebraically, and estimate solutions by graphing the equations. Solve simple cases by inspection. | Solve systems of equations | Solving systems of equations graphically |
|  |  | Solving systems of equations using elimination |
|  |  | Solving systems of equations using substitution |
|  |  | Checking the solution of a system of equations |
| 11. Solve real-world and mathematical problems leading to two linear equations in two variables. | Write \& solve systems of equations | Writing \& solving systems of equations |

## 3 Functions

### 3.1 Define, evaluate, and compare functions

| Outcome | Quests | Content |
| :--- | :--- | :--- |
| 1. Understand that a function is a <br> rule that assigns to each input <br> exactly one output. The graph of a <br> function is the set of ordered pairs <br> consisting of an input and the <br> corresponding output. | Identify functions | Identifying functions |
| 2. Compare properties of two <br> functions each represented in a <br> different way (algebraically, <br> graphically, numerically in tables, or <br> by verbal descriptions). | Compare functions | Comparing functions <br> represented in different ways |
| 3. Interpret the equation $\mathrm{y}=\mathrm{mx}+\mathrm{b}$ <br> as defining a linear function, whose <br> graph is a straight line; give <br> examples of functions that are not <br> linear. | Interpret $\mathrm{y}=\mathrm{mx}+\mathrm{b}$ as <br> linear | Represent linear relationships <br> in different forms |
|  |  | Equations of linear \& non- <br> linear relationships |

### 3.2 Use functions to model relationships between quantities

| Outcome | Quests | Content |
| :---: | :---: | :---: |
| 4. Construct a function to model a linear relationship between two quantities. Determine the rate of change and initial value of the function from a description of a relationship or from two ( $x, y$ ) values, including reading these from a table or from a graph. Interpret the rate of change and initial value of a linear function in terms of the situation it models, and in terms of its graph or a table of values. | Rate of change \& initial value | Rate of change \& initial value |
| 5. Describe qualitatively the functional relationship between two quantities by analyzing a graph (e.g., where the function is increasing or decreasing, linear or nonlinear). Sketch a graph that exhibits the qualitative features of a | Distance-time graphs | Distance-time graphs |

| function that has been described <br> verbally. |  |  |
| :--- | :--- | :--- |

## 4 Geometry

### 4.1 Understand congruence and similarity using physical models, transparencies, or geometry software

| Outcome | Quests | Content |
| :---: | :---: | :---: |
| 1. Verify experimentally the properties of rotations, reflections, and translations. | Introduction to rigid transformations | Translating points on the coordinate plane |
|  |  | Reflecting points across the $x$ or $y$-axis |
|  |  | Rotating points about the origin |
| 1. Lines are taken to lines, and line segments to line segments of the same length. | Preserved properties: length | Preserved properties: length |
| 2. Angles are taken to angles of the same measure. | Preserved properties: angles | Preserved properties: angles |
| 3. Parallel lines are taken to parallel lines. | Preserved properties: parallel lines | Preserved properties: parallel lines |
| 4. Understand that a twodimensional figure is congruent to another if the second can be obtained from the first by a sequence of rotations, reflections, and translations; given two congruent figures, describe a sequence that exhibits the congruence between them. | Congruency: rigid transformations | Congruency: rigid transformations |
| 5. Describe the effect of dilations, translations, rotations, and reflections on two-dimensional figures using coordinates. | Transformations, coordinates | Dilations, coordinates |
|  |  | Translations, coordinates |
|  |  | Rotations, coordinates |
|  |  | Reflections, coordinates |
|  |  | Sequences of transformations |
| 6. Understand that a twodimensional figure is similar to another if the second can be obtained from the first by a sequence of rotations, reflections, translations, and dilations; given two similar two-dimensional figures, describe a sequence that exhibits the similarity between them. | Similarity: transformations | Introducing similarity |
|  |  | Similarity: transformations |
| 7. Use informal arguments to establish facts about the angle sum and exterior angle of triangles, about the angles created when | Triangles \& angle relationships | Angle sum theorem |
|  |  | Exterior angle theorem |
|  |  | Angle relationships: parallel lines, transversal |

| parallel lines are cut by a <br> transversal, and the angle-angle <br> criterion for similarity of triangles. |  | Using scale to analyze similar <br> triangles |
| :--- | :--- | :--- |
|  |  | Identifying similar triangles |

### 4.2 Understand and apply the Pythagorean Theorem

| Outcome | Quests | Content |
| :---: | :---: | :---: |
| 6. Explain a proof of the Pythagorean Theorem and its converse. | The Pythagorean Theorem \& its converse | Identifying the hypotenuse, right triangles |
|  |  | Identifying right triangles, Pythagorean Theorem |
|  |  | Pythagorean triples |
| 7. Apply the Pythagorean Theorem to determine unknown side lengths in right triangles in real-world and mathematical problems in two and three dimensions. | Apply the Pythagorean Theorem | Pythagorean Theorem: missing short side |
|  |  | Pythagorean Theorem: missing hypotenuse |
|  |  | Pythagorean Theorem: missing side |
|  |  | Pythagorean Theorem in 2-D \& 3-D |
| 8. Apply the Pythagorean Theorem to find the distance between two points in a coordinate system. | Distance between two points | Finding the distance between two points |

### 4.3 Solve real-world and mathematical problems involving volume of cylinders, cones, and spheres

| Outcome | Quests | Content |
| :--- | :--- | :--- |
| 9. Know the formulas for the <br> volumes of cones, cylinders, and <br> spheres and use them to solve real- <br> world and mathematical problems. | Volume: cones, <br> cylinders \& spheres |  | | Volume: cones |
| :--- |
|  |

## 5 Statistics \& Probability

### 5.1 Investigate patterns of association in bivariate data

| Outcome | Quests | Content |
| :--- | :--- | :--- |
| 1. Construct and interpret scatter <br> plots for bivariate measurement <br> data to investigate patterns of <br> association between two <br> quantities. Describe patterns such <br> as clustering, outliers, positive or <br> negative association, linear <br> association, and nonlinear <br> association. | Use \& interpret scatter <br> plots | Using \& interpreting scatter <br> plots |
| 2. Know that straight lines are <br> widely used to model relationships <br> between two quantitative variables. <br> For scatter plots that suggest a <br> linear association, informally fit a <br> straight line, and informally assess <br> the model fit by judging the <br> closeness of the data points to the <br> line. | Estimate the line of <br> best fit | Estimating the line of best fit |
| 3. Use the equation of a linear <br> model to solve problems in the <br> context of bivariate measurement <br> data, interpreting the slope and <br> intercept. | Interpret the line of <br> best fit | Interpreting the line of best fit |
| 4. Understand that patterns of <br> association can also be seen in <br> bivariate categorical data by <br> displaying frequencies and relative <br> frequencies in a two-way table. <br> Construct and interpret a two-way <br> table summarizing data on two <br> categorical variables collected from <br> the same subjects. Use relative <br> frequencies calculated for rows or <br> columns to describe possible <br> association between the two <br> variables. |  | Two-way tables |
