Series E – The placement test

The Placement Test

To determine an appropriate level for the student, the following tests should be administered over three days.

In a classroom setting students should write down the words as they are read out and write their answers on the answer sheet.

Each student should complete all three tests and the sum of the results from each should be added and divided by nine (9). Round this number down to give the correct level for the student to start on.

Example Joe Bloggs, a student, scores 18 in test 1, 22 in test 2, and 17 in test 3.

The total score is: $18 + 22 + 17 = 57$

Their level is: $57 / 9 = 6.333 = \text{Level 6}$.

Now that you have placed the students in your class, they should aim to progress from their initial level.

You will notice on each word list that the level numbers are marked. Students should be able to succeed with the words at and below their level.

Once the students have achieved two successive perfect test scores at their level they should be ready to go up a level. Students should also be encouraged to push themselves, attempting words at a higher level.

Series E – The placement test

Placement Test 1
