

# Example Text: Procedure

You will need:

- \* compost bin (available from your local council)
- \* shredded newspaper
- \* garden refuse
- \* water
- \* small shovel

## How to Set Up a Compost Bin

Method:

1. Put the bin in a sunny spot in the garden. Put it on dirt, and not on pavers or concrete.
2. Dig up the dirt under the bin with a small shovel.
3. Spread the bottom of the bin with dry grass, old twigs and branches and shredded newspaper. They will help keep the compost bin from smelling.
4. Lightly sprinkle these dry contents in the bin with a little water. Now the compost is ready to use.
5. Put in any rubbish scraps that are degradable, such as eggshells, and fruit and vegetable peelings.
6. DO NOT put in any plastic or metal containers, meat scraps or any oil/grease waste.
7. Place the lid on the compost bin and let nature do the rest.
8. Add to the compost whenever necessary. If it starts to smell, add some more dry grass or shredded newspaper.
9. In a couple of months, take the compost from the bottom of the bin and spread it on the garden. It is a great fertilizer.

Look at the pictures below and number the boxes to put them in the correct sequence.
